

Use of AI Tools Policy

This policy governs the use of artificial intelligence (AI) tools in AIAG activities. When this policy discusses AI tools, AIAG means tools powered by technology that performs functions normally associated with human intelligence, such as reasoning, learning, and self-improvement. These restrictions include, but are not limited to, uploading AIAG materials and content, including any standards, publications, training or other materials (“AIAG Materials”) for summarization, note-taking, transcribing, or recording meetings which involve AIAG or any of its entities.

AIAG intends to leverage AI capabilities in a responsible and ethical manner that respects privacy and ensures IP protection.

This policy applies to all AIAG members, volunteers, contractors, consultants, attendees, and any guests. Failure to comply with this policy may result in disciplinary and/or legal action, as well as an immediate loss of access to AIAG information.

AIAG reserves the right to monitor and audit the use of AI tools to ensure compliance with this and its other policies and to protect its intellectual property rights.
