

Supply Safe™: Cyber Safe Bundle

In partnership with NQC, a global leader in cyberthreat detection, AIAG has developed a new Supply Safe™: Cyber Safe Bundle of products to support industry efforts at protecting shared data throughout the supply chain.

The Cyber Safe Bundle consists of a **Cyber Virtual Audit**, a low-touch virtual audit to identify vulnerabilities in your organization's external facing systems, and either a basic or advanced **Cyber Risk Assessment** to gauge your organization's technical controls and identify where further safeguarding efforts are needed.

AIAG members receive a FREE one-time virtual audit scan for one domain/IP address and free access to a risk assessment.

Additional program benefits include:

- Corrective Action Plans
- Low cost options for cadenced virtual scans and remediation
- The ability to schedule resources at your convenience
- Cyber Readiness Institute Resources*
- Access to the Small Business Association eLearning*

*These resources are included with the basic Cyber Safe Bundle.

The Supply Safe™: Cyber Safe Bundle includes:

Cyber Virtual Audit: This non-intrusive remote audit searches for known vulnerabilities and misconfigurations using a database of more than 53,000 issues; vulnerabilities found during the analysis are then logged, and a report is created providing details on the specific vulnerabilities identified, as well as what actions can be taken to rectify the issues.

Basic Cyber Risk Assessment: This 20 question survey is designed to support smaller to medium sized organizations with fewer (or outsourced) IT resources dedicated to cybersecurity.

Advanced Cyber Risk Assessment: With approximately 70-80 questions, this in-depth survey is intended for larger organizations with more robust IT resources dedicated to cybersecurity.

Don't be the weak link in your supply chain! Take action now to guard against cyberthreats and attacks. Learn more: www.aiag.org/cyber.
