

2021 VIRTUAL QUALITY SUMMIT

October 5 - 6, 2021

Join us for two content-packed days during National Quality Month this year as we explore, “Charging Up Your QMS: Innovative Quality Tools for a Digital Industry” at the 2021 Virtual Quality Summit!

With two parallel tracks – one in English and one in Spanish, for the US and Mexico respectively – the 2021 summit will include both unique regional sessions and concurrent delivery of common content from OEMs and the IAOB.

This year’s event comes at a crucial time when major industry stakeholders have announced plans to aggressively transition vehicle powertrains toward an electric future. These changes will have a lasting impact on automotive vehicle manufacturers, and the expectations and requirements for their suppliers of all tiers, for years to come.

To support these technological transitions and evolving quality expectations, AIAG’s 2021 Virtual Global Quality Summit will explore innovations in quality tools and methods, including:

- The impact of additive manufacturing and software product development on product development and validation in APQP and PPAP
- The effect of digital/AI process control technologies on product traceability requirements in Control Plan and Warranty management
- The impact of virtual auditing methods and technologies on the strategies and requirements for internal, supplier and 3rd party QMS certification audits
- And much, much more

Don’t miss this opportunity to hear from industry experts on the latest developments in quality and their impact on your organization!
