ADVANCED IMDS

The growing concern regarding substance uses in products, its recycling or disposal has created a lot of legislations and global actions in the last years. Providing excellent quality material declaration data to your customers requires a thorough understanding of these regulations. Professionals must be prepared for the impact of these requirements on the future of their business. This course provides an extension of the IMDS Basic Concepts and Application course, to help you understand the regulations and anticipate their impact on your business. Additionally, students will receive hands on instruction on how to utilize IMDS’ more complicated features, such as Chemistry Manager, Where Used Analysis, MDS Update and MDS Request. It is recommended that students first attend the IMDS Basic Concepts and Application course prior to attending this Advanced IMDS course or have equivalent experience.

AIAG ISO 14001:2015 LEAD AUDITOR

This 5-day in-depth course gives you the skills and tools necessary to become an effective lead auditor in your organization. Hands-on class work, exercises and case studies will prepare you to effectively run your internal audit, as well as oversee internal auditors during the course of an audit. Learn a range of internal EMS auditing skills that will help you become a strong advocate and auditor in your company's effort to obtain maximum value from your commitment to environmental issues. Gain confidence in your audit skills - from planning through reporting the results. In addition, acquire actual experience working as a member of a functioning audit team during the course. This course is certified by Exemplar Global and meets the training portion of the requirements for certification of individual QMS auditors. This course also meets the requirements for an IRCA lead auditor.

COURSE 1 - REGULATIONS: MANAGEMENT AND COMPLIANCE

This one-hour training course provides participants with an introduction to global chemical regulations with a focus on managing the proliferation of global environmental regulations and the importance of developing compliance strategies from product design to end-of-vehicle life. This course is designed for individuals involved with activities that impact the company's environmental and product compliance such as product design, materials management, purchasing, and bringing product to market. This may include materials and product engineers, environmental and health staff, production, purchasing, quality, and sales staff. No prior knowledge of global environmental regulations is required.

IMDS BASIC CONCEPTS AND APPLICATION

This instructor-led course is designed to ensure users are familiar with all aspects of the IMDS system with an emphasis on creating quality product substance compliance data. The goal is to get you working in IMDS as quickly and efficiently as possible. Students will learn how to build, receive, and submit data in response to customer requests. All basic concepts will be reviewed in detail providing students with confidence to function competently in the IMDS system. The training focuses on more than just how to run the IMDS interface and enter data. It includes the skills and processes needed to obtain and submit accurate quality data. The automated check routines of IMDS only go so far and are not designed to nor can they be relied on to ensure that your data is correct and accurate. You are the final judge of data quality. In this class you will learn the material basics and thought processes to apply in making judgments about data submitted by your suppliers.

AIAG CORE TOOLS SUPPORT™ (CTS) SOFTWARE

Create and manage FMEA, Control Plan, and PPAP documents quickly, accurately, globally.

WWW.AIAG.ORG/STORE/CORE-TOOLS-SOFTWARE/DETAILS

The wait is over! New versions of APQP and Control Plan are coming March 1st, 2024! But why wait until then to reserve your hardcopy? Both are available NOW for presale!

APQP and Control Plan are evolving in response to changes in the industry, particularly in relation to technological advancements and vehicle complexity. The updates address increasing demands imposed by higher automation and ultimately autonomous driving, electrification, and the expanding definition of mobility. Decoupling the two documents will also facilitate more timely updates as systems evolve and emphasizes the importance of Control Plans in product development.

go.aiag.org/apqp-cp-presale

Ready to sign up for training? From transitioning to the new processes, to understanding and implementing them, we have 6 new training courses available, developed by the experts who created the standards, to get you up to speed, fast!

CREDIT-BASED TRAINING PROGRAMS

AIAG's credit-based training program provides an added value for your training investment. Through on-site or open enrollment courses, you can earn college credit for IATF 16949:2016, Quality Core Tools, and ISO/IEC 17025-related courses. The academic credits can be applied at most colleges and universities toward higher education degrees. This is the first program of its kind for automotive quality training.

Academic credits are issued by Riverland Community College, accredited by the Higher Learning Commission. To be eligible for academic credits, you must successfully complete each course.

Call us at (248) 358-3003 for details!

NOTE: Attendance to the entire course is required to receive a Certificate of Attendance with CEUs. For international course offerings, please visit www.aiag.org/store/international

AIAG IATF 16949:2016 INTERNAL AUDITOR TRAINING

This 2-day course is designed for new internal auditors and experienced internal auditors who need to perform internal quality audits to IATF 16949:2016. Participants will complete an in-depth review of ISO 9001:2015, IATF 16949:2016 and the tools to effectively prepare and conduct internal audits. Through individual participation and group exercises, participants will apply and audit the requirements of ISO 9001:2015 and IATF 16949:2016 through case study activities that focus on industry-recognized auditing techniques. A final examination is included at the end of the course.

THANK YOU TO THE AIAG TEAM FOR MAKING US ONE OF CRAIN'S BEST PLACES TO WORK IN SOUTHEAST MICHIGAN!

Founded in 1982 by the original Detroit Big 3, AIAG supports more than 4,600 member companies across the mobility industry – automotive, aerospace, defense, electronics, medical, consumer goods, and more – who collaborate on critical solutions for the global supply chain.

As AIAG continues to thrive, we are committed to helping our team members do the same. With a renewed focus on sustainability and human rights, further expansion into ACE (autonomous, connected, and electric vehicles), additional training to support staff at all levels, and other key initiatives underway, our employees' hard work and dedication drives our success.

AIAG IATF 16949:2016 LEAD AUDITOR TRAINING WITH AIAG SUPPLIER AUDITOR CERTIFICATION

IATF 16949:2016 places an increased emphasis on first and second-party auditor qualification, and this exclusive 5-day training program is the highest level of auditor training available to automotive suppliers. The course is designed to prepare first and second-party auditors to meet the requirements of IATF 16949:2016 and customer requirements of Stellantis, Ford Motor Co., and General Motors Co. This is the only IATF 16949:2016 training that combines the AIAG Supplier Auditor Certification with the ISO 9001:2015 Lead Auditor Training. A final examination is included at the end of the course.

AIAG IATF 16949:2016 UNDERSTANDING AND INTERNAL AUDITOR CERTIFICATION

In this 4-day Workshop, develop a complete appreciation for ISO 9001:2015 and IATF 16949:2016, including the process approach, risk-based thinking, and an understanding of how it is necessary and valuable to your overall business management system.

Beyond exploring the IATF 16949:2016 standard, this instructor led training explores the principles, techniques and rules relating to auditing the IATF standard for INTERNAL AUDITORS. The curriculum will be based on 19011 *(the guide for auditing management systems internally) and will culminate in the completion of an online exam for candidates.

APPLIED SPC AND MSA FOR PRACTITIONERS

Improve your understanding of the integration of statistical process control (SPC) and measurement systems analysis (MSA) into IATF 16949 and discover how to develop a higher quality process control system by selecting and applying the appropriate statistical tools. Through a combination of instructor-led training and team exercises, you learn how SPC and MSA can be applied to a manufacturing environment. The goal is to illustrate how these techniques can be incorporated into a system to provide for not only process improvement, but also product improvement. Important: The course requires you to come with a laptop loaded with Excel. It is also recommended that you download the following demos: Q-1 Macros and Minitab (latest version) before arriving to the class.

NEW! APQP AND CONTROL PLAN: TRANSITIONING

The Advanced Product Quality Planning (APQP) 3rd edition manual maintains a considerable amount of content from its previous version, while introducing notable updates on the managerial aspects of APQP, as well as certain technical tasks. These revisions include an increased focus on risk mitigation, more upfront planning around sourcing, and other key changes that ensure a more comprehensive approach.

Spanning a total of two days, this training is intended for current APQP practitioners looking to understand what’s different from the previous version, managers seeking clarity on how these changes will impact their organization, and auditors who need to update their knowledge of APQP to meet new requirements.

NEW! APQP, CONTROL PLAN AND PPAP - UNDERSTANDING AND IMPLEMENTING

As a guiding force for other tools such as FMEA, MSA, and SPC, Advanced Product Quality Planning (APQP) stands out as one of the most high-level Core Tools. If you’re looking to master APQP, it’s not enough to simply understand it, you also need to learn how to implement it, which is exactly what this course was designed to do.

Providing the most in-depth application-based training for APQP, this three-day course is the perfect fit for practitioners leading APQP endeavors in their organizations, team members providing the elements of APQP, and auditors that want to know exactly what an effective APQP deployment consists of.

APQP/PPAP CERTIFICATION EXAM

Competency qualification by AIAG in APQP/PPAP verifies an individual’s competency in product quality planning, control plans and production part approval as defined in AIAG’s APQP and PPAP reference manuals. The individual is able to apply and communicate the methodologies and, as a result, successfully support the development of products that increase customer satisfaction. This is an online exam, which requires the participant to use a device capable of streaming content through a video that will be retained to determine any testing irregularities. The participant agrees to keep their camera active at all times during the exam.

NEW! APQP OVERVIEW

Advanced Product Quality Planning (APQP) represents a key approach in the automotive industry for moving a project from concept to launch, with the goal of minimizing lead times and startup issues. If you’re committed to learning the Core Tools, APQP is the ideal place to start your journey.

Focusing on the principles and structure of APQP (3rd Edition), this overview course is intended for executives and managers looking to review the tools their teams use, team leaders wanting to understand the “bigger picture” of the process, and internal auditors that need to gain familiarity with the tool.

AUTOMOTIVE WARRANTY ASSESSMENT TRAINING

The goal of the training is to develop practitioners well versed in the tools provided in the CQI-14 manual in order to provide a warranty process that utilizes best practices. Team involvement in the training is encouraged, when possible, to provide companies with trained practitioners who have the insights and knowledge to address issues that occur in the field.

NEW! CONTROL PLAN UNDERSTANDING AND IMPLEMENTING

Control Plans contain the operational details your process needs to function - and play a role in the success of other tools such as FMEA and SPC - yet only a limited number of individuals possess adequate knowledge to make the document highly effective as well as efficient.

In this single day course, we will dive into the Control Plan 1st edition to better understand what it should look like, and how to implement it using best practices and expertise from the field.

Designed for a variety of learners, this training is particularly catered toward beginners, including engineers looking to create their first Control Plan, auditors in need of more information on what a Control Plan should contain, and associates who need to get back into Control Plans and understand what’s evolved over time.

EFFECTIVE PROBLEM SOLVING OVERVIEW

This one day workshop is based on the AIAG CQI-20 Effective Problem Solving Guide, 2nd edition. Using case studies, the workshop will give attendees the tools necessary to work through real problems to identify root cause and complete the process of effective problem solving. Attendees will take this new knowledge back into their organization to review and address the existing culture, behaviors, and competency with regards to problem solving, and to drive change within their organization.

GEOMETRIC DIMENSIONING AND TOLERANCING (GD&T)

This one-day course is an overview of the GD&T concepts in controls necessary for proper layout and applications. The course will cover typical issues that can occur when applying a traditional coordinate system and how Geometric Tolerance can overcome them. You will be introduced to the symbols, terminology and the rules for GD&T based on ASME Y14.5:2009.

IMDS BASIC CONCEPTS AND APPLICATION

This instructor-led course is designed to ensure users are familiar with all aspects of the IMDS system with an emphasis on creating quality product substance compliance data. The goal is to get you working in IMDS as quickly and efficiently as possible. Students will learn how to build, receive, and submit data in response to customer requests. All basic concepts will be reviewed in detail providing students with confidence to function competently in the IMDS system. The training focuses on more than just how to run the IMDS interface and enter data. It includes the skills and processes needed to obtain and submit accurate quality data. The automated check routines of IMDS only go so far and are not designed to nor can they be relied on to ensure that your data is correct and accurate. You are the final judge of data quality. In this class you will learn the material basics and thought processes to apply in making judgments about data submitted by your suppliers.

IMPLEMENTING LAYERED PROCESS AUDITS (LPA)

Learn how to implement Layered Process Audits (LPA) in the Automotive or any other industry to improve product quality and customer satisfaction. LPAs can be applied to verify any defined process within an organization. This course will help you use the AIAG CQI-8. Guideline to confidently implement LPA at your facility. Participants will become comfortable with an efficient LPA implementation model and the sample formats and reports provided within CQI-8. Activities in the workshop will help participants create effective LPA questions, and discussion will include differences between the major OEM Customer requirements for LPAs. A hard copy of the CQI-8 Layered Process Audits Guideline will be included in the course material.

LEADERSHIP'S ROLE IN A SUCCESSFUL LAYERED PROCESS AUDIT (LPA)

The CQI-8 Layered Process Audits Guideline stresses the importance of leadership involvement in an organization's Layered Process Audit (LPA) activities - and for a good reason: Without specific leadership behaviors and actions, LPAs are usually a waste of time and frustrating to the people involved. However, when Leadership sees the value of LPAs and participates appropriately, the organization can achieve a culture of accountability, process control and continuous improvement. What's the payoff? A reduction of scrap, rework, customer complaints, warranty and recalls. "Leadership" goes beyond tacit support by Top-Management. Learn how you can leverage your human assets to take your organization to the next level of performance.

REVERSE FMEA FOR PRACTITIONERS

Reverse FMEA is becoming a new requirement mandated by many OEM's, and appearing in more Supplier Quality Assurance documents. What is it, and more importantly how do I do a Reverse FMEA with all the other checks audits, and details we have to do on a program by program basis? This 1-day seminar will walk through the fundamentals of Reverse FMEA, giving you a sound foundation for what the methodology is, and demystify the Reverse FMEA process by showing you that many of the things included in the Reverse FMEA are already being performed inside your organization, it is just a matter of clearly identifying what the methodology is asking you to do. After we become clear on what the methodology is asking you to do, we will dive into the HOW, and step-by-step complete a Reverse FMEA looking at the activity through the lens of a Process Audit - a very common practice in all manufacturing worlds. Through connection of the details around the method and the application to your everyday tasks - you will have a sound strategy moving forward to meet the obligation without burdening your organization with additional workload.

TAKING EFFECTIVE CORRECTIVE ACTION: USING THE 8-D APPROACH

This two-day training course presents the 8-D model as an efficient and effective methodology for determining, planning, verifying, and documenting corrective actions. You will be introduced to planning for improvement using easily understood and implemented tools that will result in positive, innovative, and effective actions. The tools include the questioning technique that establishes a method by which various teams with diverse backgrounds can determine which planning steps are necessary and will result in positive actions. The 8-D approach assists teams in ensuring that all necessary steps are addressed and that an efficient and consistent communication of the results of the team activity is made.

UNDERSTANDING AND IMPLEMENTING FMEA

Establish the foundation to avoid Murphy's Law; things that could go wrong don't have to when you learn to use FMEAs successfully. This course will teach you the skills to understand and use FMEAs and the concept of risk reduction and defect prevention. Turn your quality control around when you discover the impact of failure and how you can reduce the risk with FMEAs. Then, take your skills and knowledge beyond the concepts by learning the specifics of successfully developing and maintaining design and process FMEAs for your company, which includes identifying and reducing risk factors.

UNDERSTANDING AND IMPLEMENTING STATISTICAL PROCESS CONTROL

Improve the control methods within your manufacturing system through this introduction to Statistical Process Control (SPC). In this introductory course we pair the theory of Statistical Process Control (SPC) with tactical tools to give you the best chance at effectively improving the return on investment associated with your manufacturing control strategy. From control charts to capability indices you will gain an understanding of the underlying processes that enable better process monitoring and improve the robustness of process improvement initiatives. This course will provide both functional and applicable skills, as you will learn to select the appropriate tool for an identified purpose or recognize a more complex methodology, apply the selected tool, interpret the results of the application, and make correct decisions based on the interpretation to lead to better performing processes.

CREDIT-BASED TRAINING PROGRAMS

AIAG's credit-based training program provides an added value for your training investment. Through on-site or open enrollment courses, you can earn college credit for IATF 16949:2016, Quality Core Tools, and ISO/IEC 17025-related courses. The academic credits can be applied at most colleges and universities toward higher education degrees. This is the first program of its kind for automotive quality training.

Academic credits are issued by Riverland Community College, accredited by the Higher Learning Commission. To be eligible for academic credits, you must successfully complete each course.

Call us at (248) 358-3003 for details!

USING BASELINE FMEAS TO STANDARDIZE THE IDENTIFICATION OF SPECIAL CHARACTERISTICS

Special Characteristics are a key component of any deployment, however balancing the different hand-offs between various Core Tools like Design and Process FMEA, and the Control Plan, can easily cause confusion for both the engineering team and the customer receiving the product. In this workshop, come to an understanding of a simple way how these characteristics are generated and flowed down, and the detail in controlling the interaction. Furthermore, learn to use Foundation and Family FMEA methodology to make sure that you do not have to do this work countless times for every project. Designed for the experienced practitioner, this workshop will take you full circle through the generation of these characteristics in the Design FMEA and follow the flow completely from initiation to implementation at the Work Instruction and form level.

AIAG AND VDA FMEA: ESSENTIALS FOR TRANSITIONING ELEARNING

This eLearning course provides participants with a clear understanding of the major changes in the FMEA process and toolset that are described in the AIAG & VDA FMEA Handbook. It guides the participant to examine the warning signs of a poor approach, recognize the potential weaknesses within your organization's current approach, and how to leverage the principles and values of the new approach that will bring your organization's FMEA to the next level of robustness.

Date(s)	Time(s)	Member Price	Non-Member Price

@AIAG

CORE TOOLS SELF-ASSESSMENT

AIAG has developed a free online survey to test basic competency in the automotive quality Core Tools, e.g. APQP/PPAP, FMEA, MSA and SPC, which you can use to baseline your organization's and/or your suppliers' competency.

This online resource has received a significant update to reflect the AIAG & VDA FMEA Handbook methodology. While the majority of the FMEA questions in the revised version remain focused on general methodology and techniques, all 4th edition-specific content has been replaced with questions focused on the AIAG & VDA FMEA Handbook, instead.

The questions reflect information that everyone in automotive quality today should know and was developed with the required knowledge for third-party IATF 16949 auditors as an input. Results can be used 1) to verify the effectiveness of your quality Core Tools training, 2) for supplier development, e.g. Tier 2, and 3) to develop individual or group improvement plans. This is not a certification program.

IMPLEMENTING FAILURE MODE AND EFFECTS ANALYSIS (FMEA)

This eLearning course is designed to establish the use of FMEAs and to help you learn the skills needed to practice risk reduction and defect prevention. Through this online course you will foster an understanding of the specific components of Design and Process FMEAs; utilize the FMEA to avoid Murphy's Law; relate the FMEA to APQP; and gain the needed skills to practice risk reduction and defect prevention. E-learning modules use case studies and interactive questionnaires to simulate a hands-on approach.

HTS HARMONIZED TARIFF SCHEDULE OVERVIEW

Ensure that you are compliant with customs regulations and paying the proper rate of duty on your imported products. Proper tariff classification is the basic foundation for all customs transactions, including qualification for the U.S., Mexico, Canada Free Trade Agreement (USMCA). Correct classification of your products is essential for determining the appropriate duties and remaining fully in compliance with all Customs and Border Protection (CBP) Regulations). The Harmonized Tariff System (HTS) provides duty rates for virtually every item that exists, and is harmonized to at least the 6-digit level almost across the globe.

TOMORROW’S LEADERS TODAY

AIAG and Wayne State University jointly developed program focusing on future mobility industry leaders. Participants with appx. 8-12 years of Purchasing and Supply Chain experience are nominated by their companies. Participants are required to have an assigned company project and senior leader as a mentor; direct supervision is not a prerequisite. Forward looking supply chain strategies are the topics, with a focus on practical applications, beyond theory. Participants have the opportunity to learn from 20-25 peer participants in addition to speaker/instructors.

USMCA CONTENT REPORTING

Effective July 1, 2020, the USMCA trade agreement officially replaced NAFTA as the trilateral free trade agreement between the U.S., Canada, and Mexico. Whether the manufacturer of importer is located in the U.S. (USMCA), Canada (CUSMA), or Mexico (T-MEC), the automotive industry as a whole has been significantly affected by dramatic rule changes, including an increase in overall value content requirements, the introduction of the Labor Value Content (LVC) requirements, and new categories and requirements for the qualification of automotive parts. The new USMCA Content Reporting course - developed by OEM, supplier, and free trade agreement experts - is an in-depth, comprehensive training geared toward automotive trade compliance practitioners and working managers.

NOW AVAILABLE!
GLOBAL MMOG/LE IMPLEMENTATION
TRAINING – 6TH EDITION

This highly interactive one-day course is designed to improve materials management efficiency and effectiveness in your supply chain by leveraging the Global Materials Management Operations Guideline Logistics Evaluation (MMOG/LE). Now in its 6th generation format with several areas of improved, highly relevant content, Global MMOG/LE is the standard for supply chain management processes that reduces costs, errors, inventory, waste, and workload for suppliers and customers - all while increasing customer satisfaction.

NOTE: Attendance to the entire course is required to receive a Certificate of Attendance with CEUs.
For international course offerings, please visit www.aiag.org/store/international

USMCA CONTENT REPORTING - 1 DAY

The USMCA went into force on July 1, 2020, and replaced NAFTA as the trilateral free trade agreement between the United States, Mexico, and Canada. Significant changes to rules of origin affecting the automotive industry were implemented, including increases in regional value content (RVC) requirements, the introduction of a new labor value content (LVC) requirement and establishment of new auto part categories and requirements. As industry adjusts to the new requirements, many vehicle producers and suppliers are working together to gather information to support calculations, increase qualifying content, and become audit-ready.

NEW AIAG FORCED LABOR/HUMAN RIGHTS WEBPAGE

Access Critical Resources Today!

As the mobility industry continues to evolve and expand – and supply chains grow increasingly complex and multifaceted – it’s more critical than ever for companies to establish comprehensive human rights due diligence. Since our industry sources materials and labor from countries suspected or known to have human rights and forced labor abuses, automotive and other mobility companies today face a significant risk of unknowingly contributing to, or being suspected of, violations.

Now’s the time to take action. Ensure your team’s ability to identify and address forced labor compliance risks in your supply chain with new tools and resources (including our interactive map for global legislation) and be sure to check back often as we add additional eLearning and training, webinars and events, legal awareness resources, and more.
